Encoded Message

Problem ID: encodedme CPU Time limit: 1 secon-Memory limit: 1024 MB

Difficulty: 1.4

Source: Benelux Algorith Programming Contest (B.

License: (00) BY-SA

Alex wants to send a love poem to his girlfriend Bridget. Unfortunately, she has a nosy friend, Ellen, who might intercept his message and invade their privacy.

To prevent this, Alex has invented a scheme to make his missives indecipherable to Ellen. He arranges the letters into a square, which is rotated a quarter-turn clockwise, and then he puts the resulting letters on a single line again. (For simplicity's sake, Alex doesn't use whitespace or punctuation in his poems.)

For example, the text "RosesAreRedVioletsAreBlue" would be encoded as "eedARBtVrolsiesuAoReerles" using the following intermediate steps:

R	0	s	е	s
A	r	е	R	е
d	v	i	o	1
е	t	s	A	r
е	В	1	u	е

\Rightarrow						
е	е	d	A	R		
В	t	v	r	0		
1	s	i	е	s		
u	A	o	R	е		
е	r	1	е	s		

Ellen has intercepted some of Alex's messages but they make no sense to her. Can you write a program to help her decode them?

Input

On the first line one positive number: the number of test cases, at most 100. After that per test case:

• one line with an encoded message: a string consisting of upper-case and lower-case letters only. The length of the message is a square between 1 and 10 000 characters.

Output

Per test case:

• one line with the original message.

Sample Input 1

3 RSTEEOTCP eedARBtVrolsiesuAoReerles EarSvyeqeBsuneMa

Sample Output 1
